

## Appendix D Tree Inventory Site Designation Methodology

The diagram below shows the system used in the Marietta City Tree Inventory to locate trees and planting sites along city streets.

Please note the following features of the numbering system:

1. If a lot has no formal street address, one is assigned and designated as such with an 'A'. Examples in the diagram are 103A Alpha St. and 203A First St.
2. A Site number may designate a tree or a potential tree planting site.
3. Site numbers always increment upward along a street in the same direction as the address numbers. For example, as addresses along Alpha St. progress 101, 103A, 105, etc., the site numbers progress 1,2; 1,2; 1,2; etc in the same direction.
4. Trees and sites are always assigned to the address of the lot at which they exist. If the site is on the side of a lot, it is designated with an 'S'. For example, 200 Second St has 4 sites, two in front (1 and 2) and two on the side (1S and 2S).
